To whom it may concern;

I am a faculty member in the Information Technology department at Minneapolis Community and Technical College. It was my pleasure to have Louis Goessling as a student in ITEC 2903 Software Development Projects, in Fall 2016. In this class, students work independently on projects of their choice.

Louis has an abundance of talent and enthusiasm for computer science and software engineering. During the class, he produced consistently high-quality work that met and exceeded the standards required for the class.

His projects demonstrated intelligent analysis, research, design, creativity, logic, and critical thinking skills. He is very capable of working independently on advanced problems. He is able to research, absorb and integrate new concepts and ideas into his work. Further, he demonstrated a high standard in communication skills, time management, diligence and work ethic.

For these reasons, I believe that Louis would be highly successful your program, and I hope that you will consider his application favorably.

If I may provide any more information in support of Louis' application, please contact me at 612 460 1159, or at clara.james@minneapolis.edu.

Sincerely,

Clara James
